Darien Police Department

Monthly Report

September 2024

Domestic Violence

Domestic Violence or Intimate Partner Violence (IPV) is abuse or aggression that occurs in a romantic relationship. Intimate partner refers to both current and former spouses and dating partners.

IPV can vary in how often it happens and how severe it is. It can range from one episode of violence to chronic and severe episodes over multiple years.

IPV can include any of the following types of behavior:

- Physical violence is when a person hurts or tries to hurt a partner by using physical force.
- Sexual violence is forcing or attempting to force a partner to take part in a sex act, sexual touching, or a non-physical sexual event (e.g., sexting) when the partner does not or cannot consent.
- Stalking is a pattern of repeated, unwanted attention and contact by a partner that causes fear or concern for one's own safety or the safety of someone close to the victim.
- Psychological aggression is the use of verbal and non-verbal communication with the intent to harm a partner mentally or emotionally or to exert control over a partner.

IPV affects millions of people in the United States each year. Data from CDC's National Intimate Partner and Sexual Violence Survey (NISVS) indicate:

- About 41% of women and 26% of men experienced contact sexual violence, physical violence, or stalking by an intimate partner during their lifetime.
- Over 61 million women and 53 million men have experienced psychological aggression by an intimate partner in their lifetime.
- IPV starts early and continues throughout people's lives. When IPV occurs in adolescence, it is called teen dating violence. About 16 million women and 11 million men who reported experiencing intimate partner violence in their lifetime said that they first experienced it before age 18.

Intimate partner violence can result in injuries and even death. Data from U.S. crime reports suggest that about one in five homicide victims are killed by an intimate partner. The reports also found that over half of female homicide victims are killed by a current or former male intimate partner.

Intimate partner violence can be prevented. Certain factors may increase or decrease the risk of perpetrating or experiencing intimate partner violence.

Preventing intimate partner violence requires understanding and addressing the factors that put people at risk for or protect them from violence.

Promoting healthy, respectful and nonviolent relationships and communities can help reduce the occurrence of intimate partner violence. It also can prevent the harmful and long-lasting effects of intimate partner violence on individuals, families and communities.

Cyber Security

As a part of our continued outreach and partnership in that endeavor with the Indian Prairie Public Library we meet on the first Wednesday of the month. During September's meeting the Darien Police Department presented Active Assailant and how to prevent an attack on an individual, business, faith based organization, etc. We also discussed how to make one safer during an event: run – hide – fight.

October we discussed cybersecurity. According to the National Cybersecurity "Alliance Attitudes & Behaviors" report 84% of people considered online safety a priority, yet only 38% of people use unique passwords. Slightly more than half, 51% of American actively report cybercrimes.

We discussed the types of risks on the internet, including identity theft, financial fraud and social media and how to protect oneself with credit monitoring, identity protection, use of antivirus software and the shredding of sensitive documents. Creating unique passwords. Understanding how agencies such as the IRS will contact you. We're planning a more in-depth discussion on social media safety, but in October we did discuss how to prevent phishing by not sharing information.
